# Growth Factors, Cytokines and Related Recombinant Proteins

**Leinco Technologies** offers life science researchers one of the widest selections of highly purified recombinant and natural proteins available. With a catalog of over 1,200 proteins, researchers can use our online database for one stop shopping. Leinco Technologies has a twenty year history of manufacturing high performance biological products for life science researchers.

Our recombinant proteins are manufactured to meet highly stringent purity requirements and are extensively tested to assure potent biological activity, often in multiple validated bioassays.

Many of our proteins are expressed using mammalian host cells, allowing us to offer researchers the opportunity to use recombinant growth factors, cytokines and receptors that resemble the native proteins.

When performance and results are critical, researchers turn to Leinco Technologies for their key research tools.
