Anti-PolyHistidine — Alexa Fluor® 488

Monoclonal Antibody

Product Information

Product No.: P397AF
Clone: AD1.1.10
Isotype: Mouse IgG1
Storage: 2° to 8°C

Product Description

Specificity:
AD1.1.10 activity is directed against proteins and peptides containing the H-H-H-H-H-H (6His) motif.

Antigen Distribution:
The 6His motif is present in histidine tags.

Background:
AD1.1.10 recognizes proteins and peptides containing the polyhistidine tag (His-tag). The most common His-tag is the H-H-H-H-H-H (6x-His) motif, but His-tags can comprise up to 10 His residues. His-tags can be inserted into a target gene either by cloning the encoding DNA in frame into a His-tag containing vector or by using extended polymerase chain reaction primers that incorporate the motif. His-tags can be inserted at either the N or C terminal of target proteins. The most suitable location depends on the target protein's characteristics as well as the downstream experimental methods. A variety of purification and detection methods make use of His-tags. Applications include flow cytometry, ELISA, Western blot, dot blot, peptide array, immunohistochemistry, immunofluorescence, immunoprecipitation, immunocytochemistry, histidine tag (His-tag) insertion for epitope mapping (HisMAP), and chromatin immunoprecipitation (ChIP).

His-tags are less likely than other tags to affect functionality of the fusion protein due to their relatively small size. However, His residues exist in mammalian and insect systems, and therefore there may be some background binding, depending on the experimental conditions and/or the system used.

Format:
Alexa Fluor® 488

Immunogen:
PAX6 transcription factor linked to histidine tag.

Formulation

This Alexa Fluor® 488 conjugate is formulated in 0.01 M phosphate buffered saline (150 mM NaCl) PBS pH 7.4, 1% BSA and 0.09% sodium azide as a preservative.
Alexa Fluor® is a trademark of Life Technologies Corporation.

Storage and Stability

This Alexa Fluor® 488 conjugate is stable when stored at 2-8°C.

DO NOT FREEZE

Applications

Applications and Recommended Usage (Quality Tested By Leinco):
WB[2, 4, 5, 6]
FC[1]

Other Applications Reported in Literature:

ELISA[2]
IP[3]
IF[10]

Country of Origin

USA
